

The Bunkering & Sustainability Forum – Tenerife

10-12 November 2025

Santa Cruz de Tenerife, Canary Islands

Planning Maritime Energy Strategies

ship.energy is delighted to announce the Bunkering & Sustainability Forum (#BASf25), taking place in Tenerife, Canary Islands. The event will explore how island ports and mid-sized hubs are adapting their fuel strategies and infrastructure to meet stricter environmental regulations.

With no local fuel supply, Tenerife must import all marine fuels. While traditional fuels are supported, newer options like methanol, biofuels, and ammonia require forward planning to ensure availability, efficiency, and cost-effectiveness.

Hosted by the Port Authority of Santa Cruz de Tenerife, BASf25 includes a training course, high-level round table, flagship conference, exclusive receptions, and a guided port tour - bringing key players together to shape the future of sustainable bunkering.
